ORLANDO INTERNATIONAL AIRPORT BP-266, Punchlist Verification Work

This project consisted of the observation and coordination of punchlist and warranty-related repairs for the Airside 2 Terminal Building at Orlando International Airport. The work included the correction of roofing and building envelope defects, as well as hub truss skylights, metal framed skylights, glass curtainwall, stainless steel and membrane roofing systems.

All repaired roofing systems were tested in strict accordance with AAMA 510.2 water testing protocols.

The work also included the correction of building interior architectural punchlist deficiencies as well as the coordination of all outstanding warranty and closeout documentation.

CONSTRUCTION COST: \$1,000,000
COMPLETION DATE: DECEMBER 2003
